

I was the leader for Part 2 of the project. I first laid out detailed explanation of what we needed to do for Part 2 in an email to all the group members. I made the Google Drive document and assigned the parts to each group member. I sent out emails reminding everyone to get their parts in before 3 hours before the due time so that we could review and correct anything that we needed to. I also made sure that everyone understood what we needed from the project and we used group collaboration where needed.

Emmanuel – Score: 5 – he originally made the case scenario for the car crash so I instructed him to expand a little more by writing the witness statements and giving a more detailed scenario. He was also assigned the topic of negligence for his case search.

Myself (Marcus) – Score: 4 – was assigned to do software failure for the case searches and editing of the layout of the document.

KT – Score: 5 – he was assigned car crashes for his case searches.

Daniel – Score: 5 – he was assigned strict liability for his case searches.

Saweel – Score: 5 – he was assigned to find cases that were like any of the other legal elements but were different in nature.

Group – the group was assigned the fairness analysis at the end of the document and picking out the legal elements.
